Neuronal Intranuclear Inclusion Disease

National Cancer Institute

Source

National Cancer Institute. *Neuronal Intranuclear Inclusion Disease*. NCI Thesaurus. Code C122655.

A rare, slowly progressive, multisystem neurodegenerative disorder that usually affects children. It is characterized by the presence of eosinophilic neuronal intranuclear inclusions and neuronal loss. It results in abnormalities of the central, peripheral, and autonomic nervous systems. Patients present with ataxia, extra-pyramidal signs, absent deep tendon reflexes, weakness, muscle wasting, foot deformities, and behavioral or cognitive abnormalities.
