Potential competing interests: No potential competing interests to declare.

The manuscript provides information on cadmium effects on the glutathione-peroxidase system activity. The topic is not new; effects of cadmium are well-studied.

1. Provide the Latin name of the fish in brackets by using the appropriate style.
2. Provide information on the biology of the studied fish.
3. It would be nice to have organ histology after cadmium exposure.
4. It would be nice to have some mechanistic data.
5. It should be clearly stated that analyses were made in the liver and brain; for the latter, explain why.
6. Provide study limitations.
