Primary hepatic neuroendocrine carcinoma

INSERM

Source

INSERM. (1999). Orphanet: an online rare disease and orphan drug data base. Primary hepatic neuroendocrine carcinoma. ORPHA:100085

Primary hepatic neuroendocrine carcinoma (PHNEC) is a rare hepatic tumor that may manifest with abdominal pain or fullness, as well as diarrhea or weight loss. More than 10% of cases are asymptomatic and in rare cases a carcinoid syndrome may be observed.
