

# Review of: "A Bibliometric Review of CSR in China Based on CNKI Database: 2006-2022"

Jun Ren

**Potential competing interests:** No potential competing interests to declare.

The aim of this research is interesting and meaningful, the paper is logical and well-done. But I still need to propose some minor suggestions.

- 1.The keywords are important as the main purpose of this research, the authors should rethink them seriously.
- 2.Introduction is the part of background of this research. The history explaining is not suitable, the author should pay more attention on the necessity and importance of research.
- 3.Some unnecessary text and watermarks must be removed in these figures.
- 4.In this paper, The paper needs to be revised by a native English speaker. Some expressions need to be changed and given a fresh approach by an experienced native proofreader.
- 5.Actually, the research outlook seems too vague and does not match the research process of the article.
