Potential competing interests: No potential competing interests to declare.

The authors have identified an important research gap to understand the knowledge, attitudes, and practice of urban slums of Bangladesh. This study serves as a guide to policy makers to direct the populations in need towards a better healthcare system.

The study can be further improved by providing the following details:

- Ethics approval number granted by authorities.
- The outcomes of pilot studies prior to the actual surveillance.
- The inclusion and exclusion criteria during data collection.
