The topic of the article is interesting. A review of the bibliography is recommended. It needs the approval of the hospital ethics committee. It is advisable to include the questionnaire used. The explanations of tables and figures are not clear (e.g., No, COVID-19 effect, N = 30; Yes, COVID-19 effect, N = 31). The meaning/difference between running away from home and sleeping rough to find drugs is not clear. Discussions should include comparisons with data from other countries.
