**Potential competing interests:** No potential competing interests to declare.

The study could improve by refining pitch zoning for greater spatial precision, splitting broader zones like DLZ1/2 into smaller sections. Expanding the dataset to include multiple tournaments or leagues would provide broader contextual insights and address small sample size limitations for specific variables. Classifying teams based on corner kick efficiency rather than match outcomes would enhance the focus on the study's objectives. Lastly, incorporating comparative analysis with other tournaments or leagues and further exploring cultural and tactical differences in corner strategies could offer more comprehensive findings. These enhancements would strengthen the analysis and practical applicability of the results.
