

Review of: "Impacts of Artificial Lighting on Avian Biodiversity: A Case Study of Udaipur (Rajasthan), India"

Abhimayue Singh Rathore

Potential competing interests: No potential competing interests to declare.

This scientific paper draws attention to the importance of understanding the complex interplay between artificial lighting and avian biodiversity for effective conservation strategies. By raising awareness of these impacts, the study serves as a call to action for policymakers, urban planners, and conservationists to prioritize measures aimed at reducing light pollution and safeguarding avian habitats.
