Potential competing interests: No potential competing interests to declare.

This paper provides valuable insights into the economic progression and inclusivity in India's transformative phase, there are several drawbacks that need to be addressed .

Lack of in-depth empirical analysis: The paper relies heavily on qualitative descriptions and projections without substantial empirical evidence to support the claims made. Incorporating more rigorous empirical analysis, data, and statistical methods would strengthen the paper's arguments and enhance its credibility.

Limited theoretical framework: The paper lacks a strong theoretical framework to guide the analysis and interpretation of findings. A well-defined theoretical foundation is crucial for understanding the underlying mechanisms and relationships discussed in the paper.

Incomplete literature review: The paper's literature review is brief and lacks a comprehensive overview of existing studies on economic progression, inclusivity, and innovation-driven economies. A more thorough review of relevant literature would provide a better context for the paper's contribution to the field.

Lack of counterarguments: The paper does not adequately address potential counterarguments or alternative perspectives to its claims. Including a discussion of counterarguments and addressing them would strengthen the paper's overall argumentation.

Overemphasis on projections: The paper heavily relies on future projections and assumptions, particularly in terms of economic growth and development. While projections can be valuable, they should be supported by sound methodologies and a clear rationale for their validity.

Limited focus on challenges: The paper tends to be overly optimistic about India's transformative phase, with limited attention given to the potential challenges and obstacles that may arise. Addressing these challenges would provide a more balanced analysis.

Lack of policy implications: The paper does not offer specific policy implications or recommendations for policymakers to address the issues of inclusivity, higher education, and technology adoption. Including actionable policy suggestions would enhance the paper's practical relevance.

Inadequate data sources and references: The paper lacks proper citations for the sources of data used, making it

challenging for readers to verify the information presented. Proper referencing and use of credible data sources are essential for academic rigor.

Limited engagement with the existing literature: The paper does not thoroughly engage with the existing body of literature on diversity, innovation-driven economies, and inclusivity. Providing more substantial references and linking the paper's findings to previous research would strengthen its scholarly contribution.

Insufficient discussion of limitations: The paper does not explicitly acknowledge the limitations of its analysis and projections. A candid discussion of limitations would enhance the transparency of the research and allow readers to understand the scope of the study accurately.

Addressing these drawbacks would significantly improve the paper's overall quality and enhance its suitability for publication in a journal. A more robust theoretical framework, rigorous empirical analysis, comprehensive literature review, and policy implications would strengthen the paper's contribution to the academic discourse on economic progression and inclusivity in India.
