In my view, this review paper entitled "The Efficacy of Copper Nanoparticles in Treating Viral Skin Infections: A Systematic Review and Meta-Analysis" may be considered for publication after major modifications.

1. To improve the literature review in the introduction section and other sections such as: The Prevalence and Impact of Viral Skin Infections, a synthesis method of NPs, mechanisms and action of nanoparticles against virus etc. the authors need to read the following references

2. <https://doi.org/10.1021/acsptsci.2c00195>

3. <https://doi.org/10.1021/acsanm.0c01978>

4. doi: [10.1177/2049936117713593](https://doi.org/10.1177/2049936117713593)

5. <https://doi.org/10.1016/j.molstruc.2020.129750>

6. DOI: <https://doi.org/10.1016/B978-0-323-99148-3.00003-0>

2. Detailed steps for conducting any systematic review and meta-analysis are required - Inclusion and Exclusion Criteria are required with more citations to facilitate a more comprehensive evaluation.

3. Preliminary research and idea validation are required more. To enrich the manuscript, I propose to add more literature surveys, incorporating such measures will strengthen the validity of the findings and provide a solid basis for further research in this area.
