The manuscript entitled “ The use of tele-education in medicine, during and beyond the COVID-19 pandemic: A commentary” is covering most of the distance education methods adopted during COVID-19 pandemic. However, the manuscript has following points to be improved:

1. Its not actually clear whether its a review article or research article as the sections are divided as results and then discussion.
2. The content mentioned under “Research training via Microsoft Teams” is not sufficient and is unclear and not depicting clear meaning.
3. The manuscript can be improved further by adding more literature on methods adopted for medical teaching during COVID-19.
