I found this article interesting and well-constructed. The problem addressed, i.e. linking the development of spatial data infrastructure with e-administration in Zimbabwe, was presented in the context of the SDI theory and the achievements of other, not only African, countries. Nevertheless, I recommend some amendments, listed below:

The concept of e-government in Zimbabwe should be defined and commented upon for users unfamiliar with Zimbabwe's socio-economic development.

Provide, a figure illustrating the relation between SDI components and their relationship.

Subsection 2.3. – describe the content of ISO 19 115 metadata standard as a background of other standards.
