Potential competing interests: No potential competing interests to declare.

The article is a very broad survey in 'philosophical' explanations of why there exists something like a mind.

Although, pag 31, 5. Free will, 5.1. Introduction: '... we saw that physics account for all of reality but that mentality exists fundamentally... we saw that mentality is not a property of the world, but is exhibited by minds...'.
These statements and the existence of an immaterial world, cannot be made on a philosophical argumentation.

I suggest the author reading:
