OEPA-COPP Regimen

National Cancer Institute

Source

National Cancer Institute. *OEPA-COPP Regimen*. NCI Thesaurus. Code C67170.

A regimen containing vincristine, etoposide, procarbazine and doxorubicin (OEPA) followed by cyclophosphamide, vincristine, prednisone and procarbazine (COPP), given in combination with radiation therapy for the treatment of male patients with intermediate-high risk, childhood Hodgkin lymphoma.
