The title can be modified to the suggested title for wider coverage

Implementing Machine Learning to predict the risk of Cardiovascular Disease

The references must be mentioned in the uniform pattern. Second, some of the references listed in the reference section have not been cited in the research paper. A review for the same needs to be undertaken prior to finalization of the research paper.

A review for grammatical and spelling mistakes needs to be carried out prior to publication of the research work.

Figure 05 mentioned in the research work is very important but the view in columnar fashion needs to be improved so that the reader will be able to read it easily without putting more strain on the reader.

The conclusion section should include the futuristic scope of the research work.

The research paper must be checked using any similarity index checking software prior to publication.
