Potential competing interests: No potential competing interests to declare.

The topic of the study is of great importance and global interest. The manuscript is well-written and needs minor revision concerning style. AMR in the abstract must first be defined, then used as an abbreviation.

The period 2000-2017 missed many advances in the recent 7 years. Moreover, many antibiotics were introduced after 2012 that were not addressed. However, I find the article quite interesting.

Other References: There is no need for these references since they are not mentioned in the text.

References: 1, 2, 9, 11, and 34 full journal names; the names must be abbreviated for consistency.
