**Potential competing interests:** No potential competing interests to declare.

This manuscript deals with the use of recycled plastics in pavement construction. Although it is an interesting work, in my opinion, the authors need to discuss further their results as well as to compare these with other references. Moreover, microstructure and phase characteristics should be added. Please add if you have or refer to something in the text about this. Please rewrite the conclusions in a more brief mode.

Good luck,

Kind regards,
