

Review of: "Breast Cancer Subtypes And Prognosis: Answers To Subgroup Classification Questions, Identifying The Worst Subgroup In Our Single-Center Series"

Paulo Luz

Potential competing interests: The author(s) declared that no potential competing interests exist.

Good effort from the time, but that's not clear which the hypothesis or research question, and the article does not bring news regarding the state of art. We should focus in a specific subgroup instead of putting a lot of data which makes it hard to read. Also, there is some misconception with some terms like HER2 positivity and HER2-enriched (they are not equivalent).
