

# Review of: "Impending role of hippocampal neurogenesis in the development of chronic epilepsy following seizures after Kainic acid and Pentylenetetrazol treatment"

Hui Min Yap

Potential competing interests: No potential competing interests to declare.

1. Can the researcher introduce the role of KA and PTZ on seizure/chronic epilepsy in the introduction chapter? Can they provide some literature (citation) or justification on the rationale to use KA and PTZ?
2. Can you mention in the article how you decided the dosage of KA used in this experiment?

Thanks.
