Potential competing interests: No potential competing interests to declare.

Abstract should be modified as a whole.

Overall, English quality must be enhanced.

Literature review is not extensive. So enhance with more number of literatures specifically focused on super alloy materials with milling operations.

Quality of the figures (1, 3, 4, and 5) should be enhanced in the entire manuscript.

Result discussion is not sufficient. It should be improved for every section.

Number of responses should be more for adequate analysis of each section.

Summary and future scope must be written properly.

Introduction and literature review must be separated.

Sustainability part must be added as a separate section.

Effect of various coolants must be studied in detail.

According to Fig. (6a), every response should be studied in detail.

Thorough proofreading is required for minimizing grammatical errors.
