Right Ventricular Hypertrophy by ECG Finding

National Cancer Institute

Source

National Cancer Institute. *Right Ventricular Hypertrophy by ECG Finding*. NCI Thesaurus. Code C71077.

An electrocardiographic finding suggestive of a hypertrophied right ventricle, characterized by large R wave amplitudes in the right precordial leads and secondary findings of right atrial enlargement, right axis deviation, and typical pattern of ST depression and T wave inversion in the right precordial leads. (CDISC)
