**Potential competing interests:** No potential competing interests to declare.

The manuscript describes an interesting and new experimental approach on two plants use in traditional medicine.

I have some minor comments as follow:

Report the plant name in extenso

Add information on plant clection, period, modality, phenological status, quantity, etc

How the extract was administered and the description of the form of administration are missing.

Chemical characterization should be usefull to give a comparability of results on the same plant species
