Potential competing interests: No potential competing interests to declare.

- Very long abstract.
- The references should be recent,
- Which referencing style was used in this manuscript? It should be improved.
- The figures are not well labeled. The labeling of figures should be below the figure.
- Remove the numbering and bullets from the article,
- The structure of the methodology, results, discussion, and conclusion are not clear hence very hard to determine them.
- The study identifies key issues regarding environmental factors for sustainable development and investment goals. Some specific issues should be improved.
- The contribution of this study is not clear in the introduction and it should be explained more in the conclusion.
