Thank you for inviting me to review this paper. Please below find my specific observations.

## Title

Specific and clearly stated.

## Abstract

The authors briefly describe this section but there is a missing of specific software (e.g. SPSS, STATA, R etc.) used to conduct the analysis.

## Introduction

Clear enough but i am wondering about research gap!! What is the novelty of this research? Again i would suggest to explain in details why TAM is appropriate for this study? It is important to rewrite the hypothesis (remove significantly influence).

## Methodology

This part is not clear and confusing. The authors simultaneously used convenience sampling and stratified sampling techniques!!!

There is no specific analytical techniques mentioned!

How many items were in every constructs is missing!

## Results

It is not valid to estimate 4 constructs together!!. Please run the analysis again separately. What kind of regression used to estimate the coefficients is missing!

## Discussion

Fair. I would suggest you to compare with neighboring countries to improve the effectiveness of the study.

Conclusion

Fair enough.
