Potential competing interests: No potential competing interests to declare.

1. The size of the data set should be provided in Section 3.1. It appears that the used dataset is very small.
2. The three preprocessing methods that you are using are described in Section 3.1. Please explain them properly.
Provide the preprocessing architecture so that it can be understood clearly.
3. In Section 3.2, I would appreciate it if you could show me the proposed model architecture.
4. You should take some other models and evaluate your own model in comparison to them. It demonstrates the performance of your model.
5. The results are affected by the fact that you are using a relatively small dataset. Please test your model on a large dataset. Then it has more clarity in results.
