Review of: "Context Matters: A Note on the Special Conditions for Effective AI Adoption in Organizations"

Muhammad Ali¹

1. School of Computer Science, Institute of Management Sciences, Peshawar, Pakistan

I do not know which category this paper fits into. It is just a few recommendations, which honestly feel superficial without giving any concrete solutions for the problem at hand. The problem identified is quite important: how organizations must adopt AI integrations into their systems. But this is such a complex problem that has numerous dimensions. Also, there are so many types of organizations that vary widely based on their location, size, etc.

It better suits a newspaper article rather than a research article. In order to make an impact with their article, the authors must focus on some specific interventions in some specific type of organization. Just stating that these 7 aspects are important for all organizations is misleading. Organizations are of numerous types and can greatly vary from each other based on their location, type, size, etc. So focusing on one such type is more valuable and helpful, in my opinion.

Further, some proper background study should be performed, and primary data should be collected to understand the existing mechanism of AI integration. Only then can some specific interventions be proposed.
