Congrats for the hard work!

Please, find my comments below:

## Introduction

The reference Billman et al. 2006 seems to be far from the current technological situation, and thus, I am not sure it could be grouped in the same category of the others (Daugherty and Wilson 2018, Seeber et al. 2020, etc.).

## Why Collaborative Intelligence?

I would add the term 'augmented intelligence' (DOI: 10.1109/MMUL.2017.8) to the list of terms referring to the same concept.

(Jarrahi 2018) is cited several times in the same paragraph. May you try to rearrange the wording in order to avoid this situation. If it needs to be cited twice, you could also quote the exact phrase.

## Results

The comparison between different projects could be performed using a set of predefined attributes so that it produces a table with the results.

## General comments

The grouping of references do not allow to get a precise link to the source commented (e.g., ... and improve productivity (Mason, Ayre, and Burns 2022, Schuh et al. 2020, Szász et al. 2021, Veile et al. 2020). We cannot tell which of the references precisely indicate or relates to the text exposed.

I do miss more details on how the technical aspects are designed (and possible implemented) to allow a collaboration between humans and AI models.

The list of example apps is very nice, but I think it could be a great idea to include some pictures, or link some audios.

In general, I miss a deeper understanding about the collaborative technologies behind the tools reviewed, it is a nice brief as a first introductory paper.

Best regards.
