You did well with the paper, but there are some suggestions to improve it. Herewith are my feedback:

1. The background should consist at maximum four paragraphs since too much explanation that do not connect with the main topic of the paper. For example, your first paragraph probably not necessary explain the very basic knowledge otherwise you can merge it with another paragraph.
2. In the method chapter, you better use STROBE guideline to write everything following it. It will make your paper have more strength.
3. For term sex (Chapter result) should be changed with "sex birth assigned" following the change within the gender issue nowadays.
4. Try to make your graph (Figure 1) more aesthetic.
5. Why did the table 3 different with others?
