

Review of: "Exact Solutions of Kantowski-Sachs spacetimes in the Framework of Creation-Field Cosmology"

Rashid Zia

Potential competing interests: No potential competing interests to declare.

In the paper, the Author has discussed the Kantowski-Sachs spacetimes in the context of creation field theory of Hoyle and Narlikar.

In my opinion the title of the paper is very generalized and should be more precise.

The expressions for scale factor written below Eq. 17 and in Table 1 differ.

Author has claimed that both the inflationary scenario and the accelerated expansion of the universe are possible in the framework of C-field cosmology. I would suggest the author to give graphical representation of the obtained mathematical expressions for various cosmological parameters in support of his claim.

References mentioned at the end have ambiguities. Title of some reference papers are missing.

Therefore, I recommend the paper for revision. The paper may be published in the journal "Qeios" after incorporating the suggestions.
