Potential competing interests: No potential competing interests to declare.

As a medicinal plant, *Solanum nigrum* is renowned for its dynamic therapeutic activities in the Indian and Chinese systems of medicine. The manuscript reports its prospective pharmacological and medicinal significance, and this is worth investigating. However, some issues should be resolved.

1. Pages 5-7: The structures should be drawn as shown in *Phytochemistry* (2021, 184, 112656), especially for the sugar moiety.
2. Page 6: Provide the chiral information for 'Solanine'.
3. No steroidal saponins in the title species?
