

Review of: "A Research Note on Natural Reclamation Processes that Support Mangrove Biodiversity Spheres: Sedimentation in Three Major River Deltas in Northwestern Luzon Using Aerial Imagery"

Dazhao Liu

Potential competing interests: No potential competing interests to declare.

The paper is informative, well thought out and logical. There is sufficient remote sensing imagery as well as UAV imagery to support the arguments. The paper is innovative in that it is validated by comparing satellite imagery from different periods and combining it with UAV imagery, which can be difficult and laborious to collect. However, the necessary explanations are missing after the satellite image comparison and the UAV image verification, and the final analysis alone is not sufficient. Overall, the paper has a strong practical and reference value and is recommended for publication.
