Potential competing interests: No potential competing interests to declare.

1. Abbreviations in the abstract must be clarified to the reader.
2. Supplementary data containing the results was not supplied for review.
3. Results of the chemical analysis, antioxidant activities, and anti-inflammatory activities were not subjected to statistical analysis to determine if the results present significant differences between the different drying techniques.
4. Number of samples employed in the experimental analysis must be revealed.
5. Results of the study can't be based on singular sample experimentation.
