Potential competing interests: No potential competing interests to declare.

Concise review summarizing the important studies of cucumber for health benefits. I believe the depth of the review is appropriate, and the structure of the paper is easy to follow. Few comments are given below:

- The title can be rewritten.
- Figure 1. Indeed, there are more types of cucumbers, especially for pickling. Those could be added.
- The pickle picture could also be informative.
- A, B, and C are not clear.
