Review of: "Visualization of Home Security Sensor System Based on IoT Server"

Leonardo Valdivia[1]

1 Universidad Panamericana

Potential competing interests: No potential competing interests to declare.

The paper is easy to read and understand, which is appreciated by the authors.

I think they should focus their efforts on explaining in detail what is new about their solution compared to what already exists on the market.

In the same way, I think they should carry out real tests in a daily environment to know the real needs.

Finally, I think you should think about the option of adding a battery, if you have a power failure your device will stop working and it will not be possible to detect gas leaks.
