After reviewing the Qeios ID HLNIKH article, it presents conditions for publication. This is an important experimental work in the search for data regarding factors that affect the reproductive performance of dairy cattle, in a specific location in Ethiopia. Data are interesting to compare with results collected in other related research around the world, by a variety of research groups. The work considering its summary, introduction, experimental design as well as the current discussion and conclusion are well written and explored. The data is undoubtedly interesting to complete knowledge on the subject.
