the following comments will improve the manuscript quality.

The topic "Insulin Sensitizers like Metformin and GLP1 with Degludec as Anti-aging" was not properly covered. Rather, the commentary explains the intricate connection between albumin and insulin and how insulin influence albumin gene expression and production. It also explains how albumin act as ant-aging. Hence, the topic can be rephrased to any of the following.

1. The Anti-aging role of albumin and its modulation by insulin.
2. Insulin: An albumin modulator plays a critical role in Anti-aging.
3. The Anti-aging role of insulin through albumin modulation.

the abstract and conclusion should be rephrased to exclude Metformin, GLP1 and Degludec.

Thank you.
