The topic is so interesting, but the author wrote just a simple research note on Dengue and its eradication efforts in Mexico. But as author the basics of Research note writing should be followed. But here it seems like a summary of measures to control dengue.

I suggest author should revisit this topic and write in proper structure to make simple for the reader. I am not mentioning here typical writing method, instead of this author can follow the way of drafting a research note or research idea.

Because Research notes are not full academic papers but some factors are indeed. which are **discussion notes, seeking to advance a new idea, theoretical perspective, research program, or methodological approach in organization studies.**
