Potential competing interests: No potential competing interests to declare.

This paper explores the regional heterogeneity impact of environmental uncertainty on the dual goals of carbon emission reduction. In order to further improve the quality of the paper, I think the following modifications need to be made.

- 1, In the introduction, it is necessary to clarify the problems solved based on the existing literature.
- 2, The existing literature is not well reviewed in the literature review section.
- 3, The results need to be compared and analyzed with the results of the existing literature.
- 4, There are no limitations discussed in the conclusion.
- 5, The paper needs further polishing.
