

Review of: "Spatio-Temporal Analysis of Precipitation Patterns in Xinjiang Using TRMM Data and Spatial Interpolation Methods: A Comparative Study"

Wenyu Yang

Potential competing interests: No potential competing interests to declare.

1. Please add line numbers and page numbers in the manuscript
2. The current introduction is too shallow. What are the background of traditional rainfall-runoff analysis? What is the developing trend of satellite remote sensing data for climate research? What is the significance of this study? These should be included.
3. If you are submitting to a international journal, the Chinese characters should be avoided
4. Please add the data source for TRMM 3B43_V7
5. I don't think it is recommended to place formulas in the table
6. The formats of tables should be unified
7. There are too many Chinese characters in the figures
8. The discussion is too descriptive and superficial. What are the possible reasons for the finding? What are the similar and different parts compared to previous findings? What are the significance of the findings? These should be included
9. The reference format is not standard. Please add doi links.
