RASVAC-C

National Cancer Institute

Source

National Cancer Institute. *RASVAC-C*. NCI Thesaurus. Code C29401.

A synthetic vaccine used for cancer immunotherapy also known as Ras(cis 12)-Vaccinia Vaccine, RASVAC-C is based on a mutant peptide epitope of the Ras oncoprotein at codon 12 that induces recognition and induction of tumor-specific, cell-mediated immune responses. Ras is an intracellular GTP-binding protein involved in signal transduction and regulation of proliferation and differentiation. (NCI04)
