# Pancreatic Mucinous-Cystic Neoplasm with Intermediate Grade Dysplasia

National Cancer Institute

## Source

National Cancer Institute. *Pancreatic Mucinous-Cystic Neoplasm with Intermediate Grade Dysplasia*. NCI Thesaurus. Code C6883.

A non-invasive mucinous cystic neoplasm that arises from the pancreas and is characterized by the presence of moderate dysplasia. The neoplastic columnar mucin-producing epithelial cells form papillary projections or crypt-like invaginations. There is cellular pseudostratification and mitotic activity present.
