Potential competing interests: No potential competing interests to declare.

1. The abstract of this article needs to be precise, and the organization of the content should be improved. Some typos were formed. I suggest the writer concern about it.
2. The manuscript requires basic grammatical revision.
3. The introduction lacks a research background. I recommend providing more information about the research objective.
4. The plant ethno-pharmacological literature can be added rather than where it grows. And the research aim should be precise.
5. In methods & materials, why was only a two-day maturation done? Are there any references about it?
6. The preliminary phytochemical test should have a standard reference. Please provide it. Besides, in the method section, several parameters were tested without proper references. Authors should concern about it.
7. The results should be briefly explained, and the histological figures can't be understood well due to the lower resolution.
8. The discussion part of this manuscript should be organized as per the research plan and should discuss precisely the novelty of this research.

Overall, the study requires careful planning, thorough result verification, and detailed presentation. Some major revisions have to be done to improve the quality of the manuscript.
