**This paper is not able to be published due to major issues. This paper needs much improvement such as:**

1. The paper is in an incomplete stage. The structure of the paper is not complete. The effectiveness and accuracy of this method may need further verification through practical experiments and applications. Thus, the authors need to add an experimental section.
2. Comparisons with other methods are needed for table comparison. Figures and tables need to be clear and need to be numbered.
3. No experimental study has been done, and the experimental study to determine accuracy and efficiency is missing.
4. The proposed system is not compared with other existing methods.
5. The author needs to provide a detailed description of the hiding process that embeds the QR code, to be explained in a clear way.
6. Conclusions and future scope need to be specified. Future directions should be added.
