This manuscript is well-structured and well-written. The discussion is thorough and the paper is generally well done. However, a few minor edits should be considered:

1. Provide a more conceptual discussion about which factors significantly affect the growth of mushrooms and methane production, and why the results vary under different conditions.
2. In Table 2, row 2, consider editing the units to remove any redundancy (e.g., "cm" in parentheses).

Overall, these minor revisions will further enhance the clarity and quality of the manuscript.
