Potential competing interests: No potential competing interests to declare.

1. The representation of this article should be improved, e.g., definitions and equations
2. The language usage of this article should be improved for better readability
3. In page 9, below equation 4, *"Where z, z_1, z_2, z_3 and z_4 each takes randomly a value from $T = [-2 \ -1 \ -0.5 \ 0.5 \ 1 \ 2]$ "*

It is not clear to me how T is constructed and what is the intuition behind these values in T . Discussion on this is needed for better understanding.
