The researchers have taken a good topic for discussion but the above paper lacks in certain aspects as discussed below

1. Abstract should be more precise and clear.
2. Methodology is not clear. Framework for proposed work talks about the analytical model whose description is totally missing.
3. Literature survey should include more research and finally conclusion should be made as to what authors concluded and how their study will be different from the previous work.
4. Research paper should be concise focusing more on the actual work being done rather than discussing the generalized scenario in detail.
5. Structuring of paper needs to be improved. It is more in a thesis writing format rather than a research paper format.
6. Formatting of references is poor.
7. Conclusion part can be expanded along with some insight on future work.
