Dear authors,

This preprint manuscript is so interesting on students' perceptions.

Nonetheless, the article needs to be improved:

- 1) For example, on which authors were you based to carry out the methodology? You need to add citations in this section, to also make your survey replicable for future studies.
- 2) The section "Activity (students' choice of topics)" in the methodology should be removed and placed at the beginning of the Results, as a results sub-section.
- 3) Did you have authorization from your institution's Ethics Committee to conduct this study? If yes, please add the authorization reference code, as well as the institution/department that allowed it to be carried out.
- 4) Discuss more your findings with other studies around the world, to make your study more robust.

In the future, it will be necessary to work with more students, and with primary, secondary, university, public and private schools, to make descriptive statistical comparisons.

All the best
