Dear editors, thank you for choosing me as a reviewer for this article.

Dear author, I appreciate your work, but it needs some details about

1. the exact mechanism or mechanisms by which the bacteria resist antibiotics, specially the genetic one.
2. the alternatives for antimicrobials, specially the antiviral and antifungal, because these titles are broad.
3. There is no conclusion to conclude the reasons behind antibiotic resistance, the alternatives, and the impact of this on global health, as mentioned in the title.

Best regards,
