# Hypoplasia of the mitral valve annulus

INSERM

## Source

INSERM. (1999). *Orphanet: an online rare disease and orphan drug data base. Hypoplasia of the mitral valve annulus. ORPHA:99058*

Hypoplasia of the mitral valve annulus is a rare, congenital, mitral valve malformation characterized by hypoplastic annulus which usually appears within a complete mitral valve hypoplasia, causing mitral valve stenosis. Association with other cardiac malformation is common, including coarctation of the aorta, aortic valve stenosis, Shone complex and hypoplastic left heart syndrome.
