In this paper, the authors introduced the Ekeland variational principle (EVP) and some results in fuzzy quasi-metric spaces (FQMS) under the non-Archimedean t-norms. In my opinion, the paper should be considered for publication in the journal after minor revision; the main problems are as follows:

1. The abstract is too long; rewrite.
2. Whether the keywords can be more concise.
3. The format of 'Table 1' should be adjusted.
4. Pay attention to the writing of mathematical symbols in the text. Some symbols are expressed in English.
5. The author can add some examples to illustrate the accuracy of the results in this paper.
6. Please unify the reference format and cite the latest articles in recent years.
